

TrackSafe™ GRP Walkways

4 TrackSafe™ Systems Datasheet

TrackSafe™ GRP mesh track walkways provide a non-slip surface for engineers to move around on while highlighting the potential pedestrian hazard to drivers.

- Non-sparkling and non-corrosive.
- A long-lasting, low-maintenance alternative to timber, concrete, gravel and steel.
- Anti-slip event in wet, icy or oily conditions.
- Quick and easy to install without the need for heavy lifting equipment.
- Provides a safe walking route for NWR operatives and passengers should they need to evacuate the train before a station.
- Safe track crossing within depots.
- Can reduce labor costs on site.
- Available in a range of four systems to suit your requirements.
- Each system can be made to your bespoke requirements.
- Optional lighting available in the LUX systems.

Four TrackSafe systems to choose from

We've been providing Track & Cess Walkways for years and, while there isn't a 'one-size-fits- all' solution, we have now developed a range of four standard options that can be adjusted to meet everyone's needs. Each one is supplied in modular form with clear, concise diagrams to enable rail engineers to assemble it on site.

Get in touch today to discuss which solution.
